

APU Solutions Expands User Base and Alternative Parts Offering Through Partnership with United Recyclers Group

Overland Park, KS, January xx, 2007 - APU Solutions, the leading alternative parts procurement solution provider, has entered into an agreement with United Recyclers Group (URG), one of North America's largest automotive recycler organizations with over 250 members throughout the U.S. and Canada. The agreement provides URG's extensive membership base the ability to sell alternative parts through APU Solutions' online solution, PartsNetwork™. PartsNetwork, used as an alternative parts management and purchasing tool by collision repair facilities, insurance appraisers and adjusters, significantly increases its inventory as URG members join the network of suppliers.

"URG members bring the quality and broad scope of alternative parts we continually seek for our PartsNetwork solution," said Charles Lukens, APU Solutions' President and Chief Operating Officer. "We also look forward to expanding our relationship with URG in the future by bringing new technology solutions to its members," continued Lukens.

"URG carefully evaluates product and service partners for URG members," commented Michelle Alexander, URG's Operations Manager. "With APU Solutions, we can offer our members the latest technology for expanding their sales channels and purchasing opportunities," said Smith.

APU Solutions began rollout of the product on a regional basis in January 2007 and is providing all implementation and training, including ongoing support for URG recycler members.

About APU Solutions

APU Solutions is an online procurement solution provider, servicing the automotive parts and salvage vehicle industries. APU offers efficiencies and expanded market opportunities for buyers and sellers of alternative automotive parts through its open exchange environment. APU succeeds due to the strength of its communities, the unlimited opportunities provided by a true free market, and by providing an environmentally responsible product offering.
